

Fraud Doesn't Work Alone. Neither Should You.

"Data sharing and cross-payer collaboration are **critical in disrupting healthcare fraud** schemes that operate across multiple plans."¹

OVERVIEW

Fraud schemes don't stop at payer boundaries, and neither should your analytics. Many bad actors exploit visibility gaps by billing multiple plans using the same tactics or shifting across networks.

SharedAnalytics™ by Healthcare Fraud Shield is a collaborative intelligence engine that connects the dots across payers. By securely aggregating de-identified data from participating health plans, SharedAnalytics™ uncovers patterns, emerging schemes, and outliers that would otherwise go unnoticed. It delivers early warnings and broader insight into emerging risk.

COLLABORATION FUELS SMARTER DETECTION

SharedAnalytics™ taps into intelligence from across the HCFS client network to expose provider behavior, billing schemes, and trends that seem low-risk alone but are high-risk in aggregate. With advanced machine learning and anomaly detection, participating plans benefit from collective insights without compromising data privacy or control.

SharedAnalytics™ transforms isolated data points into actionable network intelligence so you can act faster and more effectively.

KEY BENEFITS

- Detects fraud patterns spanning multiple payers
- Flags provider behavior missed in isolated data
- Boosts model accuracy using cross-payer trends
- Identifies novel schemes and coding anomalies
- Protects privacy through strict de-identification
- Connects to CaseShield®, FWA360Leads®, and PostShield®

CLIENT VALUE EXAMPLES

Challenge: Out-of-state lab billing slips past a single plan's filters

Solution: SharedAnalytics™ identifies similar billing across other plans and enables collaborative action

Challenge: Provider's volume appears normal in one plan but spikes across others

Solution: SharedAnalytics™ reveals overutilization trends across the network and alerts plans for joint investigation
