AIShield®

AI-Powered Insight for Real-World Action

"The application of AI to healthcare fraud detection is a **game-changer for spotting and stopping fraudulent activity.**"[1]

OVERVIEW

Rules-based detection is essential for catching known patterns and enforcing policy compliance. But as fraud schemes grow more complex, static rules alone may not be enough. That's where AIShield™ steps in.

AIShield™ enhances fraud, waste, abuse, and error (FWAE) detection by layering adaptive machine learning on top of your existing detection logic. It identifies subtle anomalies, prioritizes the riskiest activity, and highlights high-risk claims, providers, prescribers, members, and pharmacies across the HCFSPlatform™. The result: faster, smarter triage, fewer false positives, and more confident decision-making.

INTELLIGENCE THAT EVOLVES WITH THE FRAUD

AIShield™ uses advanced modeling, clustering, and anomaly detection to identify risk signals that rules alone can't catch. It learns from plan-specific claim data and investigator feedback to adapt over time, strengthening detection precision across modules like PreShield®, RxShield®, PostShield®, and FWA360Leads®. With AIShield™, your team can focus on real threats, not just more alerts.

AIShield™ adds intelligence to your detection strategy. It turns volume into value and insights into action.

KEY BENEFITS

- **Scores claims and entities** to prioritize investigative focus
- **Reduces false positives** and streamlines triage
- **Detects emerging schemes** and subtle behavior shifts
- **Adapts to your plan's data** and risk trends
- **Enhances results** in PreShield®, PostShield®, and FWA360Leads®
- **Supports** smarter, faster investigations with actionable intelligence

CLIENT VALUE EXAMPLES

Challenge: Teams face a high volume of valid alerts and need to focus on what matters most

Solution: AIShield™ scores and filters leads in PostShield®, RxShield®, and FWA360Leads® to surface the most impactful cases

Challenge: Fraud schemes evolve beyond traditional detection logic

Solution: AIShield™ adapts to emerging behaviors and identifies risks earlier through machine learning

Challenge: Investigators need clearer direction on where to focus

Solution: AIShield™ ranks leads by risk and financial potential to streamline prioritization and boost ROI
