

HCFS **Audit Suite**

Connected Audit Solutions for Healthcare Payers

OVERVIEW

Healthcare audit programs face increasing pressure to improve accuracy, reduce administrative burden, and meet growing compliance demands. Yet many organizations still rely on disconnected tools, manual processes, and fragmented workflows that slow audits and limit visibility.

The HCFS Audit Suite brings together statistically valid sampling, medical record retrieval, and AI-powered medical record review into a connected audit ecosystem. Designed specifically for healthcare payers, the Audit Suite helps organizations streamline audit operations, improve consistency, and gain greater visibility across the audit lifecycle.

CONNECTED WORKFLOWS = BETTER AUDIT OUTCOMES

The HCFS Audit Suite combines three complementary solutions that can be deployed independently or together based on your organization's needs.

AuditSVRS generates statistically valid random samples that support audit defensibility and compliance requirements.

AuditMRR streamlines medical record request and retrieval operations with centralized tracking and workflow visibility.

RecordPlus uses AI, NLG, and rule-based logic to transform medical records into structured, review-ready insights that help reviewers work more efficiently.

Together, these solutions create a connected workflow from sample selection and record retrieval through review and audit resolution.

KEY BENEFITS

- Flexible deployment options
- Connected audit workflows
- End-to-end audit visibility
- Reduced manual effort
- Faster audit completion
- Improved reviewer productivity
- Enhanced audit consistency
- HCFSPlatform integration

FLEXIBLE CONFIGURATIONS

Organizations can implement the solutions they need today and expand as audit programs evolve.

AuditSVRS Only

Support statistically valid sampling and audit defensibility.

AuditMRR Only

Streamline medical record request and retrieval operations.

AuditSVRS + AuditMRR

Combine defensible sampling with efficient record collection.

AuditMRR + RecordPlus

Pair record retrieval with AI-powered review assistance.

Full HCFS Audit Suite

Create a connected audit workflow from sampling through review and resolution.
