

RxShield™

POWERFUL ANALYTICS AROUND PHARMACY AND MEDICAL FRAUD, WASTE AND ABUSE

RxShield™

As pharmacy expenditures rise, pharmacy FWA continues to be a prevalent issue for both commercial and government payers. RxShield is fully integrated with PreShield, PostShield, QueryShield and CaseShield empowering Healthcare Fraud Shield customers to be able to:

- Identify prescription drugs improperly billed based on company policies and guidelines.
- Demonstrate abusive patterns of prescription use by members; such as obtaining early refills, pharmacy and doctor shopping and more.
- Detect prescribers providing medications outside the standard of care.
- Peer comparison of pharmacies for aberrancies such as excessive use of override codes, high volume of brand drugs, suspect number of controlled substances and more.
- Conduct cross-claim analysis between pharmacy and medical claims to identify potential double billing as well as diagnoses that do not support the medications prescribed.
- Easily create detailed customized analysis reports using both pharmacy and medical data.
- Keep investigators up-to-date with industry trends as new pharmacy, member and prescriber alerts are added quarterly.
