

# Generate Defensible Audit Samples with Confidence

HHS-OIG identified nearly **\$4 billion** in expected recoveries stemming from audits and investigations, reflecting ongoing federal efforts to combat healthcare fraud, waste, and abuse.<sup>1</sup>

## OVERVIEW

Healthcare audits depend on accurate, defensible sampling methodologies. Whether supporting payment integrity reviews, provider audits, compliance initiatives, or regulatory requirements, audit teams need confidence that their samples can withstand scrutiny.

AuditSVRS by Healthcare Fraud Shield simplifies statistically valid random sampling (SVRS) for healthcare payers. Built specifically for audit programs, AuditSVRS helps organizations generate defensible samples, reduce administrative burden, and accelerate audit preparation using proven sampling methodologies aligned with industry standards.

## AUDIT CONFIDENCE STARTS WITH DEFENSIBLE SAMPLING

Manual sample generation can be time-consuming, inconsistent, and difficult to defend during audits, appeals, or regulatory reviews. AuditSVRS automates the process with configurable sampling options, built-in extrapolation tools, and transparent methodologies that support audit accuracy and consistency.

As part of the HCFS Audit Suite, AuditSVRS integrates seamlessly with AuditMRR and RecordPlus to support a connected audit workflow from sample selection through medical record review.

## KEY BENEFITS

- Statistically valid random sampling
- Built-in SVRS & extrapolation wizard
- Configurable sampling methodologies
- HCFSPlatform integration
- Reduced manual sampling effort
- Transparent sampling methodology

## CLIENT VALUE EXAMPLES

**Challenge:** Audit teams struggle to create defensible samples that meet regulatory requirements.

**Solution:** AuditSVRS automatically generates statistically valid samples using proven methodologies that support audit confidence and compliance.

**Challenge:** Manual sampling processes delay audit timelines and consume valuable staff resources.

**Solution:** AuditSVRS streamlines sample generation and extrapolation, allowing teams to start audits faster and focus on review activities.

## KEY OUTCOMES

- Stronger audit defensibility
- Reduced sampling bias
- Faster audit workflows
- Lower administrative burden
- Improved compliance readiness
